- ZOONOSES
- Environmental Health (EH) Research Scan: Aims and Scope

NCCEH's EH Research Scan aims to expand awareness of topics in environmental health, in line with NCCEH's vision to be the indispensable online resource for environmental health practitioners and policy-makers across Canada. "*We focus on health risks associated with the physical environment and identify evidence-based interventions to mitigate those risks.*" This review is not official or peer reviewed. It does not cover all research, news, and information, and NCCEH is not responsible for the accuracy of the content from media or databases. How to access the items? Click on the link related to each entry and it should take you to the item. Not all links are open access; some are abstract links where paid journal subscription is required. **COVID-19 Publications** are listed in the sections above and there are also **COVID-19 Additional Topics** at the end of this issue.

EDITOR PICKS

Cities for all seasons – Considerations for using outdoor urban spaces during the winter [blog] Shirra Freeman

"...public health experts <u>advocate</u> spending time outside while taking appropriate precautions (e.g., physical distancing, mask-wearing, and hand hygiene) to reap the health benefits of social, cultural and physical activities in fresh air."

Outdoor winter dining during the COVID-19 pandemic [field inquiry] Angela Eykelbosh

"Regardless of whether dining occurs indoors or outdoors, dining out heightens the risk of COVID-19 transmission, and this risk is primarily due to spending time unmasked with another individual whose health status is unknown. The first and most important means to decrease the risk of dining out is to dine with members of one's own household or bubble..." more

Environmental surface and air sampling in the context of COVID-19 pandemic [field inquiry] Tina Chen

"This field inquiry describes a scenario in which SARS-CoV-2 RNA was detected via surface sampling in an office setting. While no cases of COVID-19 have been confirmed in the office space or in the same office building, other occupants in the building are wondering about the validity and implications of the sampling result, and whether environmental sampling should be adopted more widely."

Air cleaning technologies for indoor spaces during the COVID-19 pandemic [blog] Juliette O'Keeffe

This document addresses the question, "Can air cleaning devices reduce the risks of SARS-CoV-2 transmission indoors?" and provides additional considerations and key messages.

Health Resources for the COVID-19 Pandemic – updated [topic page] National Collaborating Centre for Environmental Health

NCCEH has prepared a specially curated topic page on Covid-19. Visit http://www.ncceh.ca/environmental-health-canada/ncceh-health-agency-project/desc

EDITOR PICKS, CONTINUED

PHIs in the investigation of environmental drivers of elevated blood lead [journal article] Esther Tong (right), Tom Kosatsky

"...Here we review the steps involved in investigating higher-level blood lead reports and the roles and limits of PHI involvement in those investigations."

Face shields in public: better than nothing but not good enough [blog]

Angela Eykelbosh

In this blog, several key questions are addressed, including, "What is the evidence for face shields as source control or personal protection?", "What is the role for face shields as a public health tool?", and "What about when a mask or a face shield just won't do?".

Psychosocial impacts of the COVID-19 pandemic: A frame of reference from lessons learned through disasters in Canada [webinar]

Mélissa Généreux

"This presentation details findings from Canadian-led studies on the psychosocial impacts resulting from communities who experienced large-scale disasters in Canada."

An Introduction to SARS-CoV-2 - updated [evidence review] Juliette O'Keeffe, Shirra Freeman, Anne-Marie Nicol

"This document has been updated from previous versions published in April and July 2020 to reflect new findings and provide additional information about the virus that may be relevant to the public health response. As new evidence and new interpretations evolve, this document will continue to be updated."

November Research Scan with COVID-19 sections [blog] National Collaborating Centre for Environmental Health

This monthly Research Scan highlights recent environmental health publications by topic and provides easy access to article abstracts and report summaries to support public health professionals, researchers, planners, students, and others working in public health. Covid-19 topics are included.
